1.Write a PL/SQL block that declares two variables: one for a user's name (VARCHAR2) and one for their age (NUMBER). Assign values and print both using DBMS_OUTPUT.PUT_LINE.

```
    DECLARE
 name varchar2(100):='sneha';
 age int:=25;
BEGIN
 dbms_output.put_line(name);
  dbms_output.put_line(age);

END;
/
```

Output:

```
sneha
25
```

2. Create a PL/SQL block that uses an IF statement to check if a given order amount is above 500. If yes, print 'Eligible for free delivery', else print 'Delivery charges apply'.

```
  DECLARE
 amount float:=2200;

BEGIN
 if amount >500 then
  dbms_output.put_line('Eligible');
 else
  dbms_output.put_line(' Not Eligible');
  END if;
END;
/
```

Output:

```
Eligible
```

3. Write a PL/SQL block that uses a simple LOOP to print the numbers 1 to 5 using DBMS_OUTPUT.PUT_LINE.

Hint: Use a counter variable and EXIT WHEN condition inside the loop.

```
SET SERVEROUTPUT ON;

DECLARE
   counter NUMBER := 1;
BEGIN
   LOOP
      DBMS_OUTPUT.PUT_LINE(counter);

      EXIT WHEN counter = 5;

      counter := counter + 1;
   END LOOP;
END;
/
```

Output:

```
1
2
3
4
5
```

4.Declare a cursor in PL/SQL to select all product names from a table called PRODUCTS. Fetch each product name and print it using DBMS_OUTPUT.PUT_LINE.

Hint: Assume the PRODUCTS table has a column PRODUCT_NAME.

```
DELIMITER //

CREATE PROCEDURE getPnameByRow()
BEGIN
   DECLARE cpid INT;
   DECLARE cname VARCHAR(100);
   DECLARE done INT DEFAULT 0;

   DECLARE productcursor CURSOR FOR
      SELECT pid, pname FROM product;

   DECLARE CONTINUE HANDLER FOR NOT FOUND
      SET done = 1;

   OPEN productcursor;

   ploop: LOOP
      FETCH productcursor INTO cpid, cname;

      IF done = 1 THEN
         LEAVE ploop;
      END IF;

      SELECT cpid AS Product_ID, cname AS Product_Name;

   END LOOP;

   CLOSE productcursor;
END //
```

DELIMITER ;

Product_ID	Product_Name
1	tv

Product_ID	Product_Name
2	TV

Product_ID	Product_Name
3	Washing Machine

Product_ID	Product_Name
4	Refrigerator

Product_ID	Product_Name
5	Kurti

Product_ID	Product_Name
6	Jeans

Product_ID	Product_Name
7	T-Shirt

Product_ID	Product_Name
8	Sofa

Product_ID	Product_Name
9	Dining Table

Product_ID	Product_Name
10	Office Chair

Product_ID	Product_Name
11	JavaScript Book

Product_ID	Product_Name

5. Write a PL/SQL block that tries to divide two numbers entered as variables. If a division by zero occurs, catch the exception and print 'Cannot divide by zero'. Otherwise, print the result.

```
SET SERVEROUTPUT ON;

DECLARE
   num1 NUMBER := 10;
   num2 NUMBER := 0;
   result NUMBER;
BEGIN
   result := num1 / num2;
   DBMS_OUTPUT.PUT_LINE('Result: ' || result);

EXCEPTION
   WHEN ZERO_DIVIDE THEN
      DBMS_OUTPUT.PUT_LINE('Cannot divide by zero');
END;
/
```

Output:

```
Cannot divide by zero
```
