1. Create two tables in SQL: influencers (with influencer_id as PRIMARY KEY and name) and posts (with post_id as PRIMARY KEY, influencer_id as FOREIGN KEY, and caption). Insert at least 3 influencers and 2 posts for each influencer.

```
create TABLE influencers(influencers_id int PRIMARY KEY
AUTO_INCREMENT,influencers_name varchar(50));
```

```
INSERT INTO influencers(influencers_name)VALUES('sneha patel'),('diya
patel'),('neha lad');
```

	influencers_id	influencers_name
Edit Copy Delete	2	sneha patel
Edit Copy Delete	3	diya patel
Edit Copy Delete	4	neha lad

```
CREATE TABLE posts (post_id int PRIMARY KEY AUTO_INCREMENT,influencers_id int
,caption varchar(50) ,FOREIGN KEY (influencers_id) REFERENCES
influencers(influencers_id));
```

```
INSERT into posts (influencers_id,caption)

VALUES(2,'My morning workout routine.'),

(3,'Amazing sunset views!'),

(3,'nice day'),

(2,'Enjoying a beautiful day!'),

(4,'Travel memories from Goa'),

(4,'My new fashion look!');
```

	post_id	influencers_id	caption
Edit Copy Delete	1	2	My morning workout routine.
Edit Copy Delete	2	3	Amazing sunset views!
Edit Copy Delete	3	3	nice day
Edit Copy Delete	4	2	Enjoying a beautiful day!
Edit Copy Delete	5	4	Travel memories from Goa
Edit Copy Delete	6	4	My new fashion look!

2. Write an SQL query using INNER JOIN to display each post's caption along with the name of the influencer who posted it, based on the tables you created.

SELECT posts.caption,influencers.influencers_name FROM posts INNER JOIN influencers ON posts.influencers_id = influencers.influencers_id;

caption	influencers_name
My morning workout routine.	sneha patel
Amazing sunset views!	diya patel
nice day	diya patel
Enjoying a beautiful day!	sneha patel
Travel memories from Goa	neha lad
My new fashion look!	neha lad

3. Write an SQL query using LEFT JOIN to show all influencers and their posts, including influencers who haven't posted anything yet. If an influencer has no posts, display 'No Posts' in the caption column.

Hint: Use IFNULL or COALESCE to handle NULL values in the result.

```
SELECT
  influencers.influencers_id,
  influencers.influencers_name,
  posts.post_id,
  IFNULL(posts.caption, 'No Posts') AS caption
FROM influencers
LEFT JOIN posts
ON influencers.influencers_id = posts.influencers_id;
```

influencers_id	influencers_name	post_id	caption
2	sneha patel	1	My morning workout routine.
2	sneha patel	4	Enjoying a beautiful day!
3	diya patel	2	Amazing sunset views!
3	diya patel	3	nice day
4	neha lad	5	Travel memories from Goa
4	neha lad	6	My new fashion look!

4. Write an SQL query using RIGHT JOIN to list all posts and the corresponding influencer's name, ensuring that even posts without a matching influencer_id (if any) are shown.

SELECT posts.post_id, posts.caption, influencers.influencers_name FROM influencers RIGHT JOIN posts ON influencers.influencers_id = posts.influencers_id;

post_id	caption	influencers_name
1	My morning workout routine.	sneha patel
2	Amazing sunset views!	diya patel
3	nice day	diya patel
4	Enjoying a beautiful day!	sneha patel
5	Travel memories from Goa	neha lad
6	My new fashion look!	neha lad
