

1. Create a table called Playlist with columns: id, song_name, artist, genre, and play_count. Insert at least 5 sample records representing your favorite songs from Spotify.

```
create TABLE playlist (id integer PRIMARY KEY AUTO_INCREMENT,song_name  
varchar(50),artist varchar(80),genre varchar(50), play_count INT);
```

```
INSERT INTO playlist1 (song_name,artist,genre, play_count)VALUES
```

```
('Believer', 'Imagine Dragons', 'Rock', 1200),
```

```
('Shape of You', 'Ed Sheeran', 'Pop', 1500),
```

```
('Blinding Lights', 'The Weeknd', 'Pop', 2000),
```

```
('Perfect', 'Ed Sheeran', 'Romantic', 1800),
```

```
('Stay', 'Justin Bieber', 'Pop', 2200);
```

2. Write a SELECT query to display only the song_name and artist from the Playlist table, but show the artist column as 'Singer' using an alias.

```
SELECT song_name ,artist AS singer FROM playlist1;
```

3. Write a SELECT query to find all songs in the Playlist table where the genre is 'Pop' and play_count is greater than 100. Sort the results by play_count in descending order.

```
SELECT song_name,genre,play_count FROM playlist1 WHERE genre = 'pop' AND  
play_count >100 ORDER BY play_count DESC;
```

4. Use the COUNT aggregate function to find out how many songs in your Playlist table belong to the genre 'Hip-Hop'.

```
SELECT COUNT(id) AS total_songs FROM playlist1 WHERE genre = 'Hip-Hop';
```

5. Write a SELECT query that shows the total number of plays (SUM of play_count) for each genre in your Playlist table, grouped by genre.
Hint: Use GROUP BY with the SUM function to aggregate play counts by genre.

```
SELECT genre, SUM(play_count) AS total_plays FROM playlist1 GROUP BY genre;
```
