

1. Open MySQL Workbench or CLI and write a CREATE TABLE statement to create a table called 'restaurants' with columns: id (INT, primary key, auto-increment), name (VARCHAR(100)), location (VARCHAR(100)), and rating (DECIMAL(2,1)).

```
Create database restaurants;  
DROP TABLE restarants;  
CREATE table restarants (id int PRIMARY KEY AUTO_INCREMENT,name varchar(50),rating  
float);
```

2. Use the ALTER TABLE command in MySQL to add a new column 'average_cost' (INT) to your 'restaurants' table.

Hint: Remember to specify the data type when adding a new column.

```
ALTER TABLE restarants ADD COLUMN average_cost int;
```

3. Write a SQL statement to DROP the 'restaurants' table you created earlier. Double-check your command before running it to avoid accidental data loss.

```
DROP TABLE restarants;
```

4. Create a new table called 'playlists' for a music app like Spotify, with columns: playlist_id (INT, primary key, auto-increment), title (VARCHAR(50)), created_by (VARCHAR(50)), and created_at (DATE).

```
CREATE TABLE playlist (playlist_id int PRIMARY KEY AUTO_INCREMENT,title  
varchar(50),created_by varchar(50),created_at date);
```
